Professional Summary

Goal-driven Software Engineering professional with 4+ years of progressive experience supporting federal research and development projects for various sponsoring agencies with The MITRE Corporation. Prior to MITRE, I developed and supported EHR systems with Oracle. Driven by a natural affinity for programmatic problem-solving, I am seeking to contribute to impactful projects and initiatives. Kansas City-based developer proficient in health data interoperability, steering complex technical conversations with stakeholders, and posessing clear communication skills.

Skills & Abilities

- Python, Java, Javascript, Ruby, Pandas, Full-Stack Cloud Devops, HL7 FHIR, CI/CD
- EHR Development, Health Systems Engineering, Data Interoperability, Schema Design
- Agile, Project Task Management, Stakeholder Engagement & Analysis, UML

Experience

The MITRE Corporation

2021 – 2025

Project: Inferno | Agency: ASTP *Nov. '24 – Apr. '25*

The Inferno Project developed a ruby framework to test server-client conformance to FHIR messaging standards and Implementation Guides. My role for this project focused on being one of their test kit developers, creating & updating conformance test libraries in Ruby for FHIR implementation Guides.

- Developed and maintained the following: CARIN IG for Blue Button® Test Kit, SMART App Launch Test Kit, US Core Test Kit, Bulk Data Access Test Kit
- Created internal team tooling to assist in the automation of updating test kits to meet new conformance standards.
- Skills used: Ruby, HL7 FHIR, Data Interoperability, Agile, Stakeholder Engagement & Analysis, CI/CD

Project: Hospital Price Transparency | Agency: CMS *Aug. '22 – Apr. '24*

This project supported and advised leadership at the Center for Medicare (CM) within CMS in the implementation of the Hospital Price Transparency final rule, 45 CFR part 180. My role was to develop software to facilitate the implementation of the rule as well as general technical support.

- Developed core functionality on Hospital Price Transparency MRF validator, maintained its HPT github site.
- Data collection, visualization and transformation using Machine-Readable-Files (JSON, CSV, XML) to inform policy-making decisions for stakeholders
- Skills/Tools used: Javascript, Python, Pandas, Data analysis and visualization, Agile, Stakeholder Engagement & Analysis, CI/CD

Public Health FHIR Implementation Collaborative | Agency: CDC May '22 – May '23

PHFIC was a public-private work group established by MITRE and CDC with the aim of cultivating an environment that enabled developing new FHIR messaging capabilities for STLT health departments. I functioned as a staff developer that created and demonstrated FHIR as well as lended my expertise to the design and implementation of pilot test sessions between STLT health departments.

- Created and demonstrated functional FHIR implementations of client and server software
- Facillitated client/server testing between State and Local Health Departments
- Skills/Tools used: HL7 FHIR, EHR/EMR Development, Data Interoperability, Project Task Management, Stakeholder Engagement & Analysis, UML

Project: Transparency in Coverage | Agency: CMS *Jan. '22 – Feb. '24*

This project supported CMS (CM and CCIIO) in implementing the Transparency in Coverage final rule, 45 CFR Part 147. I assisted in the development of the MRF validator and managed its github repository.

- Developed XML file validation in the MRF Validator
- Informed Sponsor inquiry by creating new tools to compare Hospital and Insurer MRFs regarding rule.
- Skills/Tools used: Pandas, Javascript, Python, Agile, CI/CD, Stakeholder Engagement & Analysis, Schema Design

Project: CDS Connect | Agency: AHRQ *Jun. '21 – Aug. '24*

Clinical Decision Support (CDS) Connect is a public platform for authoring and sharing interoperable CDS resources. I was a full stack developer, developing and maintaining the Artifact Repository portion of the website as well as helping to administer the website in general.

- Developed and maintained CDS Artifact Repository
- General website administration & technical support
- Skills/Tools used: Full-Stack Cloud Devops, HL7 FHIR, Health Systems Engineering, Agile, CI/CD, Stakeholder Engagement & Analysis

Oracle Health

2018 – 2021

Systems Engineer II

Supported and developed clinical health applications including PowerChart and FetaLink among others. Ensured the transmission of health data messages over the interoprability bus architecture to facilitate clinical care.

- Developed Bedside Medical Device Interfaces (BMDI) and mapped health data transmission to Millennium CCL database.
- Served in 24/7 on-call rotation for Tier 2 Software Engineer support
- Skills/Tools used: iCommand, Citrix, CCL, Java, SQL, HL7 V2

Education

BS Computer Science, Missouri Western State University - May 2018
